- The first isolate of a given species during the analysis period was included. This data represents the percentage of isolates susceptible from January 1, 2024, to December 31, 2024.
 - IR: intrinsically resistant. This organism should always be considered resistant to this drug.
 - INS: insufficient isolates tested.
 - Urinary isolates only.
 - E. faecalis*: High-level gentamicin: 77% susceptible. High-level streptomycin: 87 % susceptible.
 - E. faecium*: High-level gentamicin: 96% susceptible. High-level streptomycin: 63% susceptible.
- * Interpretive breakpoints for penicillin, cefotaxime, and ceftriaxone with *S. pneumoniae* differ based on clinical diagnosis.
