1. The first isolate of a given species during the analysis period was included. This data represents the percentage of isolates susceptible from January 1, 2025, to December 31, 2025.
2. IR: intrinsic resistance. This organism should always be considered resistant to this drug.
3. INS: insufficient isolates tested.
4. Urinary isolates only.
5. *E. faecalis*: High-level gentamicin: 82% susceptible. High-level streptomycin: 91% susceptible.
