- The first isolate of a given species during the analysis period was included. This data represents the percentage of isolates susceptible from January 1, 2025, to December 31, 2025.
  - IR: intrinsically resistant. This organism should always be considered resistant to this drug.
  - INS: insufficient isolates tested.
  - Urinary isolates only.
  - E. faecalis*: High-level gentamicin: 79% susceptible. High-level streptomycin: 89% susceptible.
  - E. faecium*: High-level gentamicin: 95% susceptible. High-level streptomycin: 75% susceptible.
- \* Interpretive breakpoints for penicillin, cefotaxime, and ceftriaxone with *S. pneumoniae* differ based on clinical diagnosis.
